

Capstone Project Report

Course: Object Oriented Programming (CSEG1044)

Unit 06: Capstone Project Themes

Phase 0: Proposal and Backlog

1. Project Title

Clinic Appointment System

2. Goal of This Phase

The goal of this phase is to design a realistic first version of a Clinic Appointment System that demonstrates effective management of doctors, patients, appointment slots, and ensures conflict-free scheduling.

3. Features to be Completed

- Management of doctor and patient records
- Appointment slot creation and management
- Booking of appointments
- Cancellation and rescheduling of appointments
- Maintenance of appointment history

4. Problem Statement

In many clinics, appointment scheduling is often done manually, which can lead to errors such as double bookings and poor record keeping. This system will digitize and streamline the process.

5. Target Users

- Receptionist/Admin
- Doctor
- Patient

6. Core Entities

- Doctor

- Patient
- Appointment
- Schedule
- Visit Record

7. Workflow (End-to-End)

- Admin adds doctor and patient details
- Doctor's available slots are created
- Patient requests an appointment
- System books slot after checking availability
- Appointment stored in system
- Patient can cancel/reschedule
- History is maintained

8. Features Included in Version 1

- Basic appointment booking system
- Slot availability checking
- Record management
- Appointment modification

9. Features Excluded from Version 1

- Full hospital management system
- Billing/payment modules
- Pharmacy management
- Advanced analytics

10. Initial Backlog

- Design class structure
- Create database schema
- Implement records
- Develop slot management
- Build booking system
- Add cancellation/rescheduling
- Track appointment history

- Testing

11. Scope Control

- Limited to clinic system
- No billing/pharmacy modules
- Proper separation of logic

12. Deliverables

- Project proposal
- Group members list
- Initial backlog
- Project justification

13. Review Checklist

- Clear problem statement
- Realistic version
- Uses OOP, Swing, JDBC
- Complete workflow defined
